D. U/S Case
The above U/S represents a form of obstructive uropathy.

1. What is level of obstruction?

2. Name two other sites of obstruction involving the renal tract.
3. Which of the above three types of obstruction holds the best prognosis

4. How might this condition present? Suggest 3 ways

5. What two important considerations in this condition determine management
This is a study of a 3 day old boy baby who presented with bilateral renal masses and respiratory distress.
Q 1-4

1. What radiological study is this
2. What condition does it represent
3. What is the immediate management in a neonate
4. What NB symptom should specifically be asked about if considering the diagnosis.
The following is a renal ultrasound of a newborn baby with a palpable abdominal mass.
1). Describe what you see

2). What is this condition called.

3). What do you expect the renal fx of this kidney to be and how would you confirm that
4). Name two potential, but rare complications

5) What is the natural progression
The picture below represents a syndrome

1. Name the syndrome
2. What makes up the triad
3. Describe what the ureters may look like
4. What determines the prognosis in the neonatal age.
